246,6 kW Piccola centrale idroelettrica di Senkelbach

La Germania è uno dei leader europei nella transizione verso le energie rinnovabili. Negli ultimi vent'anni, il Paese ha trasformato radicalmente il proprio sistema energetico grazie alla Energiewende (transizione energetica), una strategia nazionale volta a ridurre le emissioni di carbonio, a eliminare gradualmente l'energia nucleare e a sostituire i combustibili fossili con fonti di energia pulita.

Le energie rinnovabili rappresentano oggi più della metà della produzione di elettricità in Germania, con l'energia eolica e solare che costituiscono la spina dorsale del sistema. I parchi eolici onshore e offshore rappresentano la quota maggiore di elettricità rinnovabile, in particolare nel nord della Germania, mentre l'energia solare si è espansa rapidamente in tutto il paese, grazie a forti incentivi politici e al calo dei costi della tecnologia. La biomassa e l'energia idroelettrica forniscono ulteriori contributi stabili, contribuendo a bilanciare l'offerta.

La Germania ha fissato obiettivi ambiziosi, puntando a raggiungere circa l'80% di elettricità rinnovabile entro il 2030 e a raggiungere la neutralità climatica entro il 2045. Per sostenere questi obiettivi, il governo continua a investire nell'espansione della rete, nell'accumulo di batterie, nell'infrastruttura dell'idrogeno e nella velocizzazione delle autorizzazioni per i progetti rinnovabili.
